INNOVATIVE TECHNOLOGY FOR HIGHLY DESALINATED WATER PRODUCTIONÃ

High water desalination without application of expensive:

- mixed-bed polishers

- decarbonators

-Ã electric deionizers

You are guaranteed to reach water specific conductivity of max 0.1 microS/cm (specific electric resistance min 10 lhm*ñm at 20 ÔÑ).

The developed technology implementation permits to:

- reduce capital investments to produce 1 m3 of highly desalinated water by 1,7 â€“ 2,2;

- reduce operating costs to produce 1 m3 of highly desalinated water by 1,6 â€“ 1,9.

Application: power engineering, oil-refining, chemical industry, microelectronics, biotechnology etc.

Patented technologyÃ www.energy.vladbmt.ru - ðáéò ðíñáÿúáίíúé ááίίε οαοίειείτσο
